

Non-Surgical Facelift Contour Thread Ampoules

Chitossil™ by Esthemax® is an innovative technology that rejuvenates and restores youthful contours to the skin. Chitossil™ provides a superior lifting, smoothing, and toning effect to dramatically reduce the appearance of wrinkles and sagging in areas such as the brows, cheeks, neck, and jowls. Chitossil™ effectively firms any area of the skin that is prone to sagging and volume loss due to aging, poor muscle tone, or weight loss.

Chitossil™ works with a proprietary activator to absorb into the skin and create a dense network of chitosan threads that attach to the skin and lift and smooth. Almost immediately, Chitossil™ firms the skin to eliminate sagging and provide a youthful, rejuvenated appearance. Chitossil™ also penetrates into the sub-dermal layers of the skin to tighten and tone sub-dermal muscles. The skin's natural elastic property allows it to fit tightly over the newly-toned muscles, which provides an additional face lift effect.

While lifting and reducing the appearance of wrinkles, Chitossil™ also absorbs into the skin to provide essential hydration and improve the skin's natural moisture balance. As a result, the skin is naturally restored from dryness and the aging processes for a long-lasting smooth, firm, and rejuvenated effect.
